

# Shift Cable Assembly 2344

## Suzuki Fully Integrated Tiller Handle

Remove the bottom cover of the tiller handle. Disconnect the shift cable by removing the E clip. Thread the new cable into the brass end piece.

Adjust cable as needed for proper cam setup and neutral clearance. This information can be found on our website under miscellaneous instructions (PDF 1222, 1223 Cam Gate Backfit).

Once the Cable is adjusted properly, re-insert the E clip and Thread the 10-32 nut against the cable end to ensure it does not pivot.

Install the bottom cover. Do not overtighten.
